# Graybill Model CFA Center Feeder For Chocolate Enrobing Lines

## Profitability While Maintaining Versatility

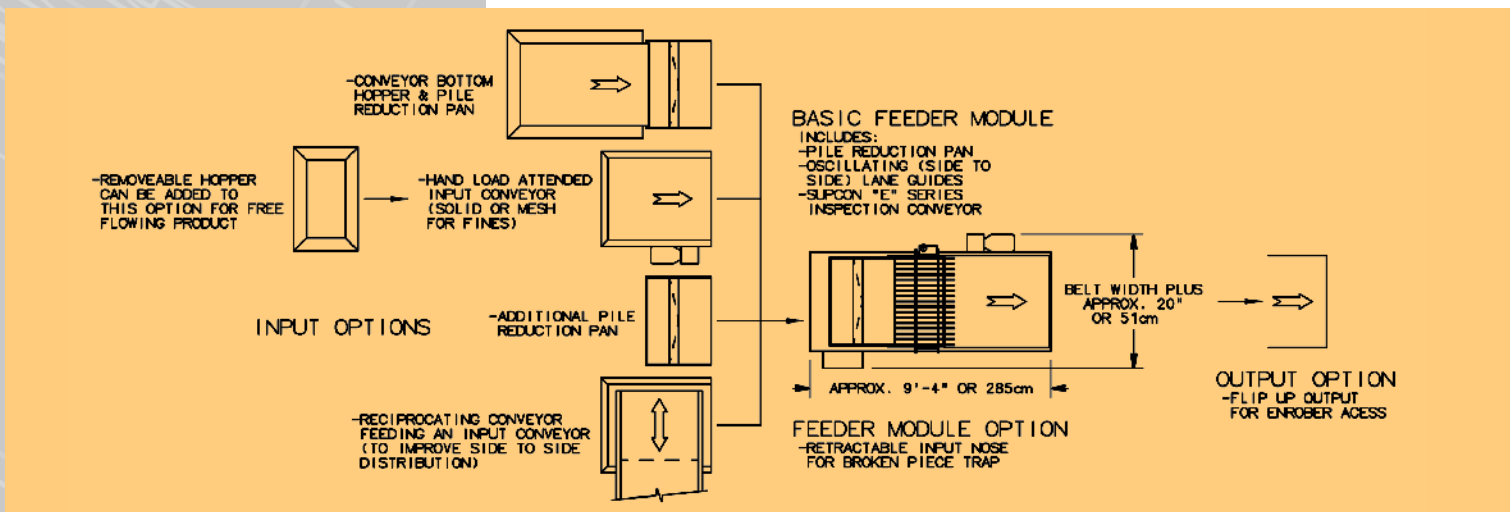

We recognize how valuable a conveyor belt, fully loaded with product can be. A full belt translates into increased production, maximizing profitability on your enrober and cooling tunnel investment. Also, we understand that in order to get the most out of your enrober line, you need to be able to feed multiple products through it.

## The Graybill Difference

Designed to maximize throughput, the Graybill Model CFA center feeder for chocolate enrobing lines is available in widths to fit each specific line. This feeder takes manually or automatically dumped product, and reduces it to a single layer while closing empty spaces. It then separates the product into lanes with variable spacing between, and discharges it with space all around. Improvements over other lines can be expected by decreasing the number of doubles and piggybacks, thus reducing the need for operator attention.

A wide variety of products can be manufactured using the Graybill Model CFA Center Feeder For Chocolate Enrobing Lines . Everything from snack items to confections, or from nuts to biscuit & cookie items can be fed from it. You can add or omit numerous options to tailor the feeder to your specific needs, as shown below. This allows you to keep your product line versatile while maximizing throughput.

## Tailor Your Feeder To Meet Your Specific Needs...

*If you're running a large, high-output dedicated product production line, ask about our other feeders. Graybill can design a feeder to suit your needs.*
